

SonicWALL® Mobile Connect™ for iOS

SECURE REMOTE ACCESS

Full network-level access for iPad®, iPhone®, and iPod touch® users

- Unified client
- Data encryption
- VPN on demand
- SonicWALL Clean VPN™
- Application intelligence and control
- Unified policy-based controls
- Full network access
- Personalized web portal

Smartphones and tablets—most notably Apple® iOS™ devices such as iPhones® and iPads®—have emerged as powerful and secure mobile computing platforms. Even so, corporations, academic institutions and government entities must require these devices to support strong VPN connectivity when used outside of the corporate network to ensure data privacy and security while taking advantage of external wireless connectivity, hot spots, etc. IT must also have the ability to scan all the inbound traffic to ensure network integrity and security as organizations are grappling with the reality that mobile devices can be conduits of information flow and, unfortunately, a relay of malware into networks either inadvertently or intentionally. When used inside the corporate network, these devices should be able take advantage of all the protection and security offered from leading-edge Next-Generation Firewall technology.

The SonicWALL® Mobile Connect™ unified client for Apple iOS provides Apple iPad®, iPhone®, and iPod touch® users full network-level access to corporate, academic or other organizational resources over encrypted SSL VPN connections. Users can download and install the client easily via the App StoreSM, simplifying deployment. When deployed with a SonicWALL Next-Generation Firewall, it creates a Clean VPN™ to decrypt and decontaminate threats from iOS traffic over SSL VPN before it enters the network. SonicWALL Application Intelligence and Control enables IT to define and enforce how application and bandwidth assets are used. When connecting over WiFi inside the network and scanned by a SonicWALL Next-Generation Firewall, iOS devices adhere to organizational security, app control and content filtering policies. Ultimately, SonicWALL Mobile Connect makes security and control an enabler, rather than a barrier to business.

Features and Benefits

SonicWALL Mobile Connect is a single **unified client** available on the App Store that lets IT define and enable easy iOS device access via SonicWALL SSL VPN and Next-Generation Firewall appliances.

Data encryption, enforced strong encryption, strong authentication and granular access policy provide security of transport.

VPN on demand allows the iOS device to automatically enable SSL VPN when a user requests an application, URL or host¹.

SonicWALL Clean VPN™ provides the critical dual protection of Next-Generation Firewall and SSL VPN to decrypt and decontaminate threats from iOS traffic over SSL VPN before it enters the network.

Application intelligence and control enables IT to define and enforce how iOS devices use application and bandwidth assets when connected to the corporate network.

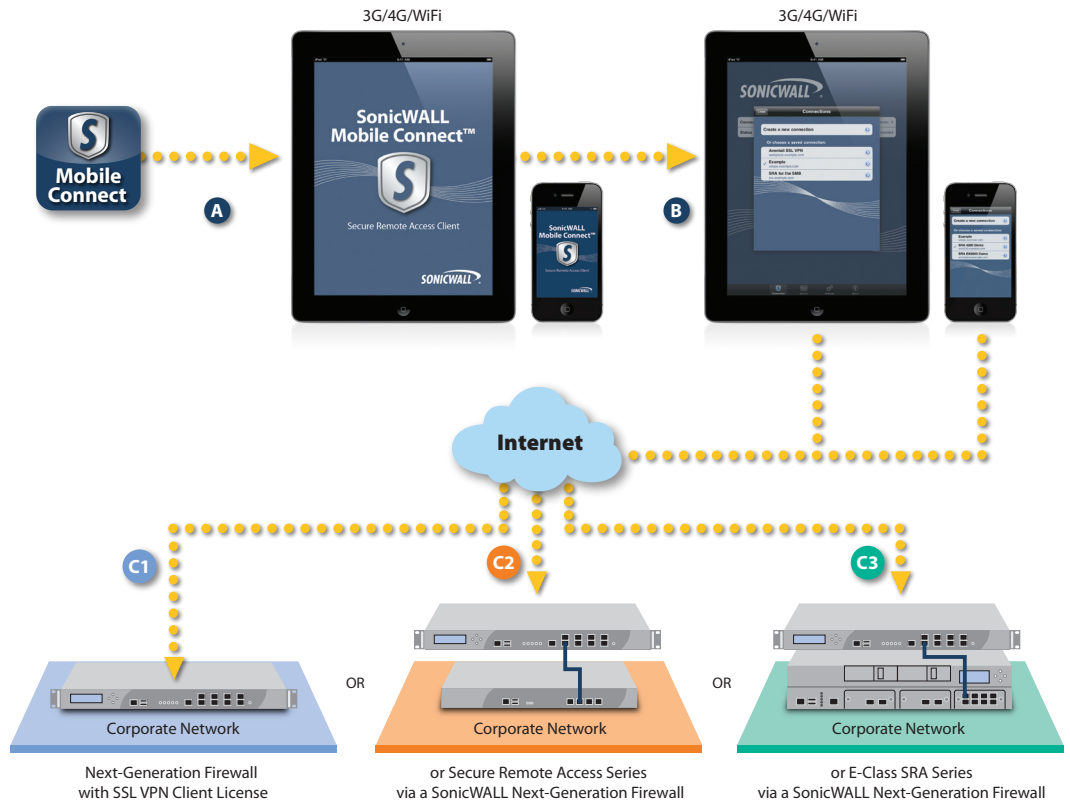

Unified policy-based controls display granular bookmarks and policies on one centralized page, thus streamlining configuration, troubleshooting and administrative overhead.

Full network access connects all iOS devices to network resources, including web-based, client/server, server-based, host-based or back-connect applications.

Personalized web portal displays only the resources that are available to iOS device users based on policy.

¹ Supported for SonicWALL E-Class SRA platform only.

- A** Download and install SonicWALL Mobile Connect from the App Store on your iPhone, iPad or iPod touch.
- B** Create a connection profile to connect to your corporate network.
- C1** Connect to a SonicWALL Next-Generation Firewall.
- C2** Connect to a SonicWALL Secure Remote Access appliance via a SonicWALL Next-Generation Firewall.
- C3** Connect to a SonicWALL Aventail E-Class Secure Remote Access appliance via a SonicWALL Next-Generation Firewall.

Specifications

SonicWALL SRA and Next-Generation Firewall Specifications

- Compatibility
- C1** TZ, NSA or E-Class NSA appliance running SonicOS 5.8.1.0 or higher
 - C2** SRA appliances running 5.5 or higher
 - C3** E-Class SRA appliances running Aventail 10.5.4 or higher

SonicWALL Mobile Connect Specifications

- Compatibility
- iPhone, iPad, iPod touch running iOS version 4.2 or higher

Software Access

Available for download from the App Store
